

**Green Courier** is the UK's leading environmentally friendly courier service

## Promoting sustainable solutions for the rapid despatch market

Green Courier is the UK's leading environmentally friendly courier service, promoting sustainable solutions for the rapid despatch market. The company is one of London's largest independent couriers and through a mix of zero and ultra-low emission vehicles, provides a Carbon Balanced service, built on decades of experience in the transport solution business.

### Meet the fleet

Green Courier utilises one of the lowest carbon emitting fleets in the industry, recording all residual carbon emissions that it is responsible for and offsetting the emissions using the World Land Trust's Carbon Balanced Programme.

### Bicycles

Green Courier operates one of the largest bicycle fleets in the country, covering all areas of central London. Green Courier also operates a fleet of electric bicycles, delivering a greater range and benefitting from satellite tracking functionality.

### Motorcycles

Green Courier uses motorcycles purpose-built by Honda and designed with low-impact environmental activity in mind. Green Courier motorcycles are a significant departure from the conventional courier bike, producing less than half the emissions allowed under current Euro 3 motorcycle standards and returning upwards of 80 mpg, thus reducing the carbon footprint further.

### Goods Vehicles

Green Courier has invested in a large fleet of ultra-low emission goods vehicles that emit a minuscule 89g/KM in CO<sub>2</sub> in addition to returning over 70mpg. This compares favourably with the more commonly used hybrid vehicles marketed today.

### Small Vans

Green Courier boasts a large fleet of small vans of which an ever-increasing proportion is made up of zero-emission electric powered vehicles, which further bolsters the company's environmental credentials. The remainder of the fleet are ultra-low emission or LPG (Liquid Petroleum Gas) powered, which is also environmentally friendly. Green Courier continually monitors for up-to-date developments in environmentally friendly vehicles in this sector.

### Large Vans

Green Courier has Short Wheelbase and Long Wheelbase Transit vans and Luton vans with tail-lifts available for the delivery of large consignments, including palletised goods. Larger vehicles means journey numbers can be minimised, thereby keeping whole-consignment emissions and costs down. Green Courier continually monitors for up-to-date developments in environmentally friendly vehicles in this sector.

## A delivery solution tailored to you

### Same Day

The size, weight and urgency of each consignment delivered by Green Courier will determine the type of service that is required.

### Eco - Delivered by the end of the day in the most environmentally considerate way

Your consignment will be collected and delivered in a way that has the least impact on the environment. We utilise our sophisticated vehicle tracking management software which accurately calculates the emissions of each individual vehicle per journey, optimising your delivery accordingly.

### Express - Delivered within agreed time parameters

This service offers the optimal balance between speed and environmental impact, where deadlines are adhered to without compromising our carbon emissions commitments.

### Direct - Exclusively delivered

This service uses a dedicated vehicle and is given the highest priority. Within minutes of your booking, a Green Courier Despatch Agent will collect your consignment and transport directly to its destination. This is a premium service for urgent requirements, or for consignments that are large enough to completely fill the capacity of the vehicle being utilised.

### Next Day

For deliveries that are not so urgent in nature, Green Courier has an overnight service available to account customers. The pricing structure is dictated by the size and weight of each consignment, and the timing window for delivery. There are three windows available, as follows:

**Next day before 0900**

**Next day before midday**

**Next day before 1600**

All consignments are picked-up and transported back to the company's main depot for safe storage. The goods are weighed and then despatched to ensure delivery within the predefined timing window.

### Multi-Drop Deliveries

Available at a regular scheduled time or on an ad-hoc basis, Green Courier conducts many regular multi-drop deliveries on behalf of its clients. Where possible, the same courier will be utilised as this helps to develop a relationship between the client and their regular delivery driver.

### International

Green Courier has global coverage, allowing for deliveries overseas to almost every town in every country in the world (barring conflict zones). For more information on pricing tariffs/rate cards, please call 0207 0344 445

 **GREENCOURIER**.co.uk

### Environmental credentials

Enabled by our state-of-the-art Navman GPS tracking system, Green Courier automatically records all fleet-generated carbon emissions that it is responsible for, and then offsets all of these emissions by working with the World Land Trust, a UK-based international nonprofit conservation organisation, taking direct action to save rainforests and other wildlife habitats.

The World Land Trust's local partners secure forested areas of very high conservation value threatened with clearance, placing them under permanent protection. Currently, it targets the buffer zone of the Podocarpus National Park on the slopes of the Ecuadorian Andes.

### Living the philosophy

Green Courier's commitment to the environment stretches beyond the business of despatch solutions. The company is actively engaged in renewable energy schemes and has a large PV solar panel system installed at the West London head office. Such a solution will represent a substantial reduction in non-fleet emissions, in addition to producing more than enough electricity to self-generate the whole of the building around the clock.

The Green Courier offices based at Green Park House in the heart of Central London are also environmentally aware and have many sustainable features:-

Furniture made from 50% recyclable materials, which in turn are recyclable, sensor lighting in all common areas, low energy lighting, highly efficient insulation, solar PV, triple glazed windows, electric charging points, cycle storage, rainwater harvesting and recycling throughout the building.

Green Courier continually monitors and reviews its impact on the environment and a concerted effort is made to buy sustainable products wherever possible.
